

How to build your NaniDad

Visit www.nanibird.com for more free designs!

SHEET **3** of **4**

1) After cutting out your NaniBird, score all lines before bending. To score lines use an old dry pen, but any pointed tool will work. Pre-bend everything before starting to glue.

2) Start gluing your bird at the head, starting with tabs 1 & 2. Next, glue down the speech bubble. Apply glue to the inside of the beak (A + B). Then fold in flaps A + B on the speech bubble forming a triangle and apply glue to the backside of the flaps.

3) Press the A flap of the speech bubble to the A side of the beak.

4) Fold down the B flap of the speech bubble and press into the B side of the beak.

5) Glue tabs 6 & 7 into place. To give your bird added stability, tape a coin down to the inside of the bottom. Then glue up the rest of the tabs.

6) Fold and glue together the hairpiece, then glue to the top of NaniDad's head. Don't forget to glue his feet into place. Banzai!!! you're done.
